

VETIDRAL FLASH

ELECTROLYTES

Description

Horses perspire heavily during intense exercise and summer weather. This results in the loss of more than just water: they also lose electrolytes, which are essential to efficient biochemical exchanges within the body. It is therefore important to fully replace lost electrolytes through appropriate nutritional intake.

Purpose

VETIDRAL is a complementary feed formulated by AUDEVARD Laboratories. It is designed to provide horses with additional nutrition and electrolytes in the event of heavy perspiration.

Formula

The VETIDRAL FLASH formula contains electrolytes in proportions identical to those found in sweat, in order to make up for losses. It also provides prebiotics to stimulate electrolyte replacement and absorption.

Our advice

Advise your customers to give VETIDRAL FLASH in the days leading up to a race or competition, so the horse can build up reserves.

Daily allowance

Empty the contents of the syringe into the horse's mouth. Administer for 1 to 3 days. Ensure water is always available.

Professional format

60 ml syringe - (EAN 3401143503811).

RECOVERY & ELIMINATION

Composition per litre

Additives :

- 3a- Vitamins, pro-vitamins and substances with similar effect : E300 vitamin C 40,000 mg.

Raw materials :

Citric acid sodium salt, sodium chloride, dicalcium phosphate, propylene glycol, potassium chloride, magnesium chloride

Analytical constituents :

Humidity 76,3%, crude protein 9%, crude fats 0%, crude ash 15,5%, crude cellulose 0%, sodium 4%, citric acid 5,2%.

This product belongs to the complementary feed for horses category.
